LOT 92: 数字内容访问控制 – 新的CAPTCHA系统专利待售

Ocean Tomo Bid-Ask™ Market patent auction lot number 92 consists of six assets. The patented digital content access control technology teaches a variety of Turing Test mechanisms capable of determining whether a human is capable of responding; a variety of mechanisms capable of detecting whether someone in a language and/or culture is responding (effectively preventing the outsourcing of cracking Captchas); and novel Captchas capable of defeating even sophisticated and high powered computerized attacks. The patents also teach mechanisms to prevent human validation requirements from interrupting workflow, in one aspect by providing the ability to keep a Captcha response updated between user tasks.
